If you are in a mess like this

100 Ltr Paint Spill

Call The Graffiti Eaters. Have them do this

Surface neutralisation & containment

No paint or water Entered the drain!

Surface restored without environmental concern

Environmental Spill Containment & Clean up

Accidental liquid spills unfortunately do happen and can cause extensive environmental damage & embarrassment. It is important that they are professionally managed.

The Graffiti Eaters have mobile spill response units that can be mobilised quickly to contain a spill and prevent it spreading and entering sensitive areas like storm water drains.

The process involves containing the spill from spreading then stabilise the substance by covering it with an absorbent material designed to soak up and retain it.

The absorbent material is then collected & discharged according to EPA guidelines.

The final step in the process is to wash the surface down and to leave the area totally clean and free of any contamination.

All wastewater is vacuum collected to ensure nothing enters a drain or harms the environment.

So... if this ever happens to you, don't get sweaty palms worrying about damaging the environment and dealing with the EPA, call in the experts to manage it all for you!

If you have a similar cleaning challenge, or would like to know more about the 'Hard Surface Restoration' jobs we perform, give us a call, or check out our website below.
