

Spin Jets and Recovery

Technical Bulletin 0108

The Graffiti Eaters have over the last few months introduced new innovations within our company to keep us at the forefront of our industry.

Our latest additions to our Service Restoration Trucks are new Spin Jets. With water wastage becoming an increased concern we have developed a system to recover water as we use it and pump it directly into a holding tank saving water run off and waste.

The new Spin Jets also allow us to not only pressure clean paths and driveways quicker but because of the new vacuum recovery system we can do this in areas where there are cars and pedestrians in the vicinity without worry of overspray. We even have a new 'mini' spin jet, which allows us to remove graffiti & grime in high to reach places.

Having the waste water pump directly into the holding tank saves time and money all round not to forget our technicians backs! Due to the water being pumped no longer do we have to empty vacuums every 5 minutes (which adds time to jobs) or wait for people to move their cars? This means we can be more effective and competitive in the marketplace.

If you have a similar cleaning challenge, or would like to know more about the 'Hard Surface Restoration' jobs we perform, give us a call, or check out our website below.
